RAJU SHARMA

Tech Lead, Full-Stack | System Architect

rajusharma98966@gmail.com | +91 9896426411 | LinkedIn | GitHub | Serving Notice Period

SUMMARY

Senior Software Engineer with 7 years of experience building scalable, enterprise-grade web applications and full-stack systems using React.js, TypeScript, Next.js, and Node.js. Experienced in AI/LLM integrations, prompt engineering, structured data extraction, embeddings, vector search, and AI-powered automation. Strong background in REST APIs, PostgreSQL, MongoDB, performance optimization, system design, microservices, and mentoring developers.

EXPERIENCE

Tech Lead, Full-Stack — Upscaller IT Solutions Pvt Ltd. **Jan 2023 - Present**

Architected a multi-tenant SaaS platform using Next.js App Router, reducing page load time by 40% and improving SEO rankings by 25%.

- **System Design:** Designed a microservices-based backend with independently deployable Node.js/NestJS services communicating over REST and message queues; paired this with a centralized Redux Toolkit + React Query state layer on the frontend to keep multi-tenant data consistent and reduce redundant API calls.
- **Mentorship:** Led a team of 7+ developers, conducting code reviews and enforcing TDD (Test Driven Development) to reduce production bugs by 30%.
- **Headless CMS Integration:** Implemented headless CMS architectures using AEM, Contentful, and custom-built CMS solutions.
- **React.js & Full-Stack Optimization:** Leveraged React Server Components (RSC) to move heavy logic server-side, improving Largest Contentful Paint (LCP) by 1.2s and boosting SEO performance for client-facing platforms.

Full Stack Developer — Laudco Media Pvt Ltd. **May 2020 - Dec 2022**

Full Stack Developer role based on strong performance, technical ownership, and consistent delivery across complex projects.

- **Career Growth:** Joined as a Software Development Intern and transitioned to a full-time Full Stack Developer role based on consistent delivery, technical ownership, and contribution to production projects.
- **E-commerce:** Developed custom checkout flow integrating payment gateways, resulting in 15% increase in successful conversions.
- **Dashboarding:** Built an analytics dashboard visualizing real-time campaign data using D3.js for complex data visualization.
- **CMS Customization:** Architected a modular CMS enabling non-technical staff to manage site content, reducing engineering support tickets by 40%.
- **Legacy Refactoring:** Led migration of a legacy monolithic frontend to a modern component-based architecture, reducing new-hire onboarding time by 50%.

PROJECTS

Hiring-Partner (AI Recruitment Platform)

Tech Stack: *Next.js, Node.js, PostgreSQL, Prisma, Embeddings, RAG, Docker, SQL, Auth, LLM Integration, DOCX Parsing, pgvector.*

- Built an AI-powered recruitment platform that extracts structured candidate profiles from PDF/DOCX resumes using LLMs and validates responses with Zod.
- Implemented semantic candidate-job matching using OpenAI embeddings and PostgreSQL/pgvector, combining vector similarity with skills and experience scoring.
- Designed REST APIs, JWT authentication, email integrations, and webhooks with AI-based email reply classification.
- Implemented provider abstraction and mock AI/email modes for cost-effective development and reliable demos, with a production path for queues, retries, rate limiting, and background processing.

Petco.com

Tech Stack: *Next.js | Node.js | MongoDB | ExpressJS | Redux | Context API | Firebase Auth | ChakraUI | Formik | Yup | Headless CMS*

- **Membership & Loyalty Systems:** Developed and optimized the "Vital Care" membership infrastructure. Engineered recurring billing logic and personalized member dashboards using Next.js and Node.js, leading to a significant increase in user retention and recurring revenue.
- **Performance at Scale:** Optimized checkout components to handle millions of monthly active users, ensuring sub-second response times during high-traffic promotional events (Black Friday/Cyber Monday).
- **Third-Party Integrations:** Integrated complex logistics and vet-verification APIs to ensure that live animal sales met all safety and compliance standards.
- **Leadership & Quality:** Managed and mentored a 7+ member engineering team, establishing strong development standards and review practices that improved code quality and lowered production defects by 40%.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, SQL

Frontend: React 18+, Next.js (App Router), Redux Toolkit, Tailwind CSS, Framer Motion, Headless CMS

Backend & DBs: Node.js, Express, NestJS, FastAPI, MongoDB, PostgreSQL, Redis, REST APIs, Webhooks, pgvector & Prisma

AI & GenAI: OpenAI API, LLM Integration, Prompt Engineering, Embeddings, Vector Search, RAG, Semantic Search

DevOps / Cloud: Docker, CI/CD (GitHub Actions), Vercel, AWS

Architecture: Microservices, Serverless Functions, Modular Architecture, Provider/Strategy Pattern

Scalability & Reliability: Background Jobs, Queues, BullMQ, Rate Limiting, Retries, Exponential Backoff, Caching, Error Handling

ACHIEVEMENTS

Open Source Contributor — Hacktoberfest (Oct 2021 – Feb 2022)

- Contributed to multiple open-source projects by developing features, fixing bugs, improving existing implementations, and reviewing community contributions.
- Collaborated with developers from different backgrounds through GitHub-based workflows, including pull requests, code reviews, issue resolution, and technical discussions.
- Ranked **Top 10 among 7,000+ contributors**, demonstrating consistent open-source participation and strong engineering fundamentals.

CERTIFICATION

Full Stack Web Developer Course — Masai — March 2019 – Feb 2020

Generative AI Foundation Certificate — upGrad — Feb 2025 – May 2025

EDUCATION

Bachelor of Business Administration (BBA) — GJU Hisar — April 2017 – May 2020
